OBJECTIVE

Final-year CS student (AI specialization) seeking an AI/ML internship to apply hands-on experience in deep learning, NLP, and end-to-end model deployment. Skilled at building production-ready pipelines — from data preprocessing and architecture design to Flask API deployment integrated with MERN applications.

EDUCATION

B.Sc. Computer Science — AI Specialization | University of Education, Lahore Sep 2022 – Oct 2026
Relevant coursework: Machine Learning · Deep Learning · NLP · Data Structures & Algorithms · Database Systems

TECHNICAL SKILLS

ML / Deep Learning	Python, TensorFlow, Keras, PyTorch, Scikit-learn, XGBoost, LSTM, Bidirectional LSTM, Attention Mechanism
NLP & LLMs	Tokenization, Lemmatization, MFCC Extraction, Hugging Face Transformers
Data Science	Pandas, NumPy, Matplotlib, Seaborn, Feature Engineering, Data Augmentation, GridSearchCV
Web & Deployment	Flask REST APIs, React.js, Node.js, Express.js, MongoDB, JWT Auth
Tools	Git, GitHub, Jupyter Notebook, VS Code, Postman, SQL

PROJECTS

Speech Emotion Recognition System 2024

[Python](#) · [TensorFlow](#) · [Bidirectional LSTM](#) · [Attention Mechanism](#) · [Flask](#) · [React.js](#)

- Built end-to-end audio emotion classification pipeline using MFCC feature extraction, achieving 6-class classification from raw speech input.
- Designed BiLSTM + Attention architecture with data augmentation, reducing overfitting and improving generalization on unseen audio.
- Deployed model as Flask REST API with React.js frontend; achieved sub-second real-time inference and automated ~60% of manual pipeline steps.

AI-Powered NLP Chatbot 2024

[Python](#) · [TensorFlow/Keras](#) · [Node.js](#) · [Express.js](#) · [React.js](#) · [MongoDB](#) · [JWT](#)

- Developed intent-recognition chatbot classifying 30+ intents using custom NLP pipeline (tokenization, stopword removal, lemmatization) with TensorFlow/Keras.
- Built JWT-secured Node.js/Express.js REST backend integrated with React.js frontend, fully automating query handling across all intent categories.

Reusable ML Pipeline — Classification & Prediction 2024

[Python](#) · [Scikit-learn](#) · [XGBoost](#) · [Pandas](#) · [Matplotlib](#) · [Seaborn](#)

- Designed modular ML pipeline (ingestion → cleaning → feature engineering → evaluation), cutting setup time by 50% for new datasets.
- Benchmarked Logistic Regression, Random Forest, and XGBoost with GridSearchCV; selected best model using F1-score and ROC-AUC metrics.

CERTIFICATIONS

Machine Learning Specialization — Coursera (DeepLearning.AI) 2024

Advanced Web Development — MERN Stack — Coursera 2024

ADDITIONAL

Languages: English (Professional) · Urdu (Native) **Interests:** Deep learning research, NLP, AI-powered web systems, open-source ML
